OFFICE VISIT NOTE (page 2)

Patient: DUNMARROW, MIRABEL DOB: 06/21/1963 MRN: 291847

Assessment and plan

1. Anemia of chronic kidney disease - new diagnosis this visit.
2. STOP spironolactone 12.5 mg due to rising potassium.
3. START torsemide 20 mg daily.
4. INCREASE carvedilol from 6.25 mg to 25 mg twice daily.
5. Continue tamsulosin 0.4 mg.
6. Repeat basic metabolic panel in 2 weeks. Return to clinic in 6 weeks.

Addendum: patient recalls hives after penicillin in 2019; allergy list to be updated.

Signed: Dr. Tobin Ashcombe 10/27/2026
